MICRO-STUK design

The butech micro-stuk design is a type of fine cement rendering that modified with high strength and durability polymers, becomes an outstanding and stylish covering, fine and tough at the same time.

butech micro-stuk design represents the best example of the chemical and technologic evolution, using the traditional clinker of the cement production and adding it other products that transform chemically the cement and make it a thinner product with extreme hardness and great flexibility. This way, we obtain a covering without joints that does not fissures and whose strength and hardness are way above of the traditional cement.

TECHNICAL INFO

MICRO-STUK design

Main characteristics

- Polymer modified fine cement.
- Seamless surface.
- Less than 2mm thick.
- No maintenance needed.
- Waterproofing and fire resistant.
- Suitable over most indoor and outdoor substrates.
- Suitable for combinations with other wall coverings as ceramic tiles.

Recommended uses

- Indoor walls in dry conditions and wet rooms: kitchens, living rooms, bedrooms or bathrooms.
- Shower cabins.
- Worktops and bathroom furniture.

MICRO-STUK design
FINISHES

Nature:

- Uniform finish without colour patches.
- Standard texture.

Fine:

- Creative finish with brush-strokes.
- Smooth texture.
